

Invisible-momentum boost correction

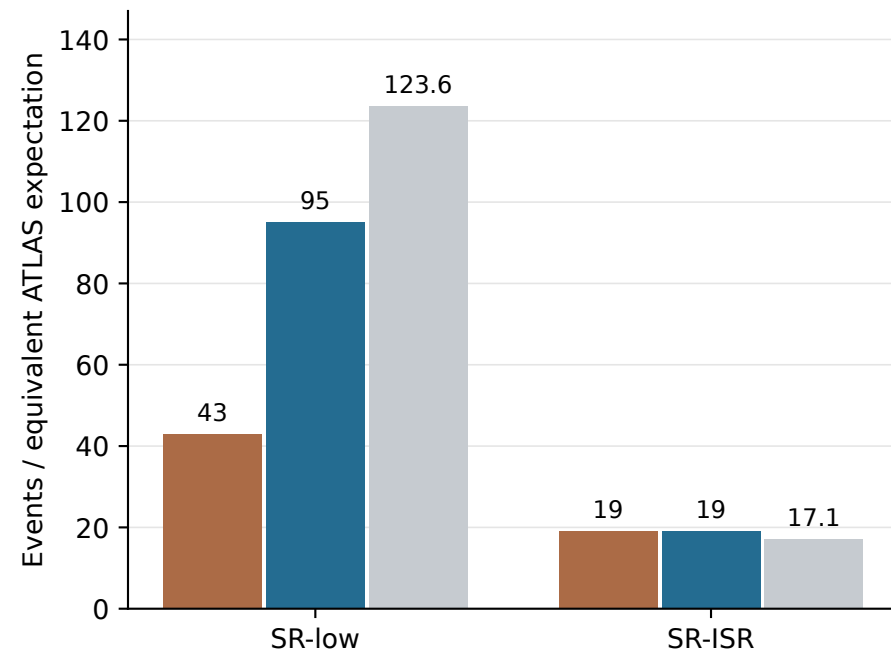

C1N2 (300, 100) GeV · ATLAS-SUSY-2018-06 · same 200,000 retained detector events

Historical mixed frame Paper-defined common boost ATLAS acceptance × 200,000

SR-low selection stages

Final signal regions

SR-low acceptance deficit: 65.2% → 23.1%. Still FAIL against the 15% tolerance.

Cached reconstruction audit only. No fresh generation, detector retuning, updated limit, or new certification.
